*A 100% increase means that CO₂ emissions doubled. For example if there were 200,000 tonnes of CO₂ emissions in 1990, there are now 400,000 tonnes in 2009

A 10,000% increase means that CO₂ emissions increased 100 times on top of the original figure. For example if there were 200,000 tonnes of CO₂ emissions in 1990, there are now 20,200,000 tonnes in 2009
